Non Return Circular Damper RSD

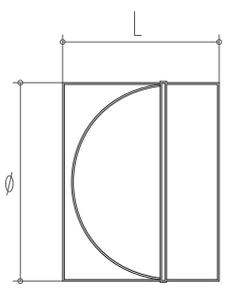

Description
Non return circular damper for mounting between two circular sections of tubing.

Application
It is used to prevent the return of the air when the fan stops.

Characteristics
The damper blades will open when exposed to excess pressure.
The damper is provided with a return spring , which determines closing of the blades when pressure drops.
By closing the blades return of the air is prevented when the fan stops.

Materials and finishing
Galvanized steel cylinder
Aluminium blades
Natural galvanized finish
